

What is \$NOOOO

-Look familiar? Of course she does, everybody remembers this chick screaming NOOOO at Trump's inauguration back in 2017.

-She embodies the woke mind virus... toxic liberalism that has rotted this country out from its core.

-The \$NOOOO community represents a majority of Americans that feel like:

1. They have been economically betrayed by completely irrational and illogical government policies.

- Double the price of food and gas in 3.5 years? Your local bridge is falling apart? Too bad, here's another \$5Billion for Ukraine. Soon the libs will be doubling your taxes so you'll be too depressed and upset to notice you can't afford anything anymore.
- Your kids will go to college to learn to hate you while being told they're better than everyone else. You'll hear all about it in 5 years when they realize they'll never be able to afford a home because the government is giving YOUR money to non-citizens for deposits on houses they can't pay for.

2. Their homeland has been made purposely vulnerable over the last four years due to open borders.

- What about a domestic policy other than giving away blue-collar jobs to illegal immigrants? Well, they get hotels, phones and money every month. Why not your job too? Now be quiet and get back to work.

3. Those that believe health and wellness should be a top priority.

- RFK Jr wants to help Trump Make America Healthy Again. Better smear this dude before he tells everyone the entire food supply is contaminated to keep you sick so big pharma can swoop in to drug you into oblivion so you can ignore all your health issues while they pile up and turn you into another number in the hospital system that needs chronically sick people to survive.

-\$NOOOO is a memecoin. What's a memecoin? It's a cryptocurrency that is based on a meme. If you aren't quite sure what a meme is, just imagine any picture you've seen with this libs crying face on X (Twitter), Instagram, Facebook, Reddit... etc.... she's been everywhere for the last 8 years.

-\$NOOOO is a community run memecoin on the Solana blockchain and the first of its kind...with a holder base of blue-collar working-class men and those patriots that believe the time is now to end this liberal hysteria and restore order to the United States of America.

- Why did we choose an N with four O's? Simple, one O for each year of Trump's first term. Easy to remember.

What is a memecoin?

-Here are some of the most popular memecoins that you might remember from the last memecoin cycle in 2021.

Dogecoin (DOGE):

- Launch Year: 2013
- Origin: Created as a joke based on the popular "Doge" meme featuring a Shiba Inu dog.
- Went viral when Elon Musk tweeted about it leading up to his Saturday night live appearance.
- Dogecoin reached its highest market capitalization of approximately \$88.8 billion on May 8, 2021.

Shiba Inu (SHIB):

- Launch Year: 2020
- Origin: Created as a "Dogecoin killer," it's another dog-themed memecoin inspired by the Shiba Inu dog breed.
- SHIB reached its highest market capitalization of approximately \$41 billion on October 27th, 2021.

Pepe (PEPE):

- Launch Year: 2023
- Origin: Inspired by the popular "Pepe the Frog" meme. It quickly gained traction as one of the top memecoins because of its popularity on platforms like 4chan and Reddit.
- PEPE reached its highest market capitalization of approximately \$7.0 billion on May 27, 2024.

Why is \$NOOOO Different from Every Other Memecoin:

I know what you're thinking before you ask. Weren't those all BS ponzi schemes? Why is \$NOOOO different than any of those things? Well first off, it's not all BS. A lot of those guys found lifechanging wealth in this BS. But ultimately, they don't care about each other or the meme. So they fade and lose relevance because the average working guy doesn't know or care about a frog or dog coin, and the crypto community only has so many incels they can steal from.

This is where \$NOOOO differentiates as a unique community. It is built on the backs of **you, a regular blue-collar guy** that most likely doesn't even have an X account. You don't go home and try to get "likes" and "followers". You're busy doing things that aren't complete bullshit.

This means that \$NOOOO will be **insulated from the completely irrational price movement** that most of this market is dominated by.

\$NOOOO is dominated by **real men**.

Those other memecoins are dominated by sweaty incels weighing either 140lbs or 800lbs. Not much in the middle. They live in their mothers' basements pretending they know how to trade coins. Imagine Cartman yelling "I'M A TRADOOR MOM!"

You guys are at work all day, **building things in real life**. The last thing you are worried about is the new dog or cat coin that just dropped. Idiots on the other hand, chase these things like your dog would chase a new toy.

Don't worry, they'll chase this coin too. The difference is they will be buying after all the regular dudes are already holding a bag. Which means **their money will be making you wealthy**.

Why it pays to be a HODLER vs TRADOOR

HODLER = HOLDER! ... Yeah, it's spelled wrong on purpose. These crypto nerds talk funny like that.

TRADOOR = TRADER! ... Broke Dudes who try to guess every up and down swing on the chart.

Below is a chart of the memecoin \$GIGA. This coin is a great example of why **it pays to hold your position** when you find a strong community with a vision and a game plan.

Memecoins are often highly volatile, so the price action on the chart will present opportunities to sell for solid gains in the short term. This is where the crypto incels screw it up. They sell to make a little profit. Then panic when the price drops and sell more. Then it rips back up and they buy back at a higher price than what they originally owned. This is why they say to each other HFSP.... Have Fun Staying Poor!

As I will show you below, this approach to memecoins can make you money, but the life changing gains are far more likely if you invest, and HOLD as opposed to trying to "trade" it.

You can see, with \$1,000 you could have bought Giga on 02/28/2024 for \$0.0005. This would give you 2,000,000 Giga.

Within the first few months, you could have sold that Giga position on 05/10/2024 for a \$12,600 profit. That's nearly a 13x. This of course is a great trade when compared to the returns you expect from buying and selling a stock in that same time frame.

But if you held for another two months, you could have sold your Giga position on 07/08/2024 for a \$31,400 profit. That is a 30x on your initial investment and nearly 2.5x bigger than the profits taken two months earlier in May.

Lastly, you could have held your Giga position until Mid-August and sold for \$62,400 profit. This is a 62x on the initial \$1,000 and nearly doubled the profit that you would have had if you sold the month before in July.

05/10/2024 = \$12,600 profit → 07/08/2024 = \$31,400 profit → 08/16/2024 = \$62,400 profit

What I am trying to illustrate is that there can be good money made in buying and selling the short-term moves, but the life changing money is made in buying and HOLDING.

Here is another example that shows the benefits of holding your position as opposed to trading short term price action.

Below is a chart of the memecoin POPCAT. As you can see, with \$1,000 you could have bought POPCAT in the beginning of March for \$0.005. This would give you a position of 200,000 POPCAT.

If you sold 54 days in on the big move up, your \$1,000 investment would have generated \$91,000 in profit...yes you read that right. That's a 90x on your investment.

If you got spooked and sold your position two months later at lows in June, you would have generated a \$51,000 profit. Still a great trade, that's a 50x.

But in the end, the HODLERS who bought and held for 134 days could have sold their position for \$185,000 profit....again...yes you read that correctly, they turned \$1,000 into \$185,000 in a little over 4 months.

Summary

One thing that is important to point out is that these charts were able to create such large gains overtime due to the **strength of the community**. The holders of those coins truly believe that their positions will be worth exponentially more over the next 12 months.

This conviction in the community creates a base of holders that do not sell on price dips, but rather buys the dips to add to their position.

Big price swings downward will always shake out the "Tradoors" and what is left is the true believers. This is why it is common amongst the successful memecoins to go through several 70% downturns in price before truly taking off.

Crypto Language:

Here are a few terms to get familiar with in the crypto space:

1. **Market Capitalization (Market Cap):**

- Price per coin X number of coins = Market cap

-Ex: ABC coin is currently trading at \$.05, there are 1 billion coins.

$\$0.05 \times 1,000,000,000 = \50mill market cap

2. **Normies:** For the most part...that's you. Normie is used to describe a "normal" person who does not participate in the crypto markets. Mind you, the people coining these terms are 140lb incels that live in their mothers' basements...trust me, you would rather be a normie.

3. **Jeets:** A term used to describe investors who quickly sell their holdings at the first sign of a dip or small profit, a similar term used is "paper hands."

- A strong memecoin will attract investors that buy and hold because they believe in the community and the vision...so the common price fluctuations and volatility do not cause the investors to sell early.

4. **Diamond Hands:** A term used to describe someone who holds their investment regardless of market conditions, showing resilience against market volatility.

- A strong memecoin will have a holder base of diamond hands and the price action on the chart will reflect that. If you're invited to buy \$NOOOO, the hope is you have Diamond Hands. But don't worry, a jeet sneaks in now and then. If you need to Jeet, do it, we'll find someone else who wants to build lifechanging wealth.

5. **Paper Hands:** The opposite of diamond hands; it refers to someone who quickly sells at the slightest hint of trouble, often resulting in missed opportunities during rebounds.

6. **HODL:** A misspelling of "hold," this term is used to encourage investors to keep holding their assets rather than selling during price drops (i.e jeets or paper hands)

7. **FOMO (Fear of Missing Out):** The anxiety that one might miss out on a profitable investment, often driving TRADOORS to buy into memecoins during hype periods.

8. **FUD (Fear, Uncertainty, Doubt):** Negative information or rumors spread about a coin to cause panic selling.

9. **Whale:** A large investor who owns a significant portion of a particular coin and can influence its price through buying or selling.

10. **DYOR (Do Your Own Research):** Self-explanatory. **ALWAYS** do your own research.

11. **HFSP (Have Fun Staying Poor):** Jeets, paper hands, people whose lives are dominated by Fear.

How to buy \$NOOOO:

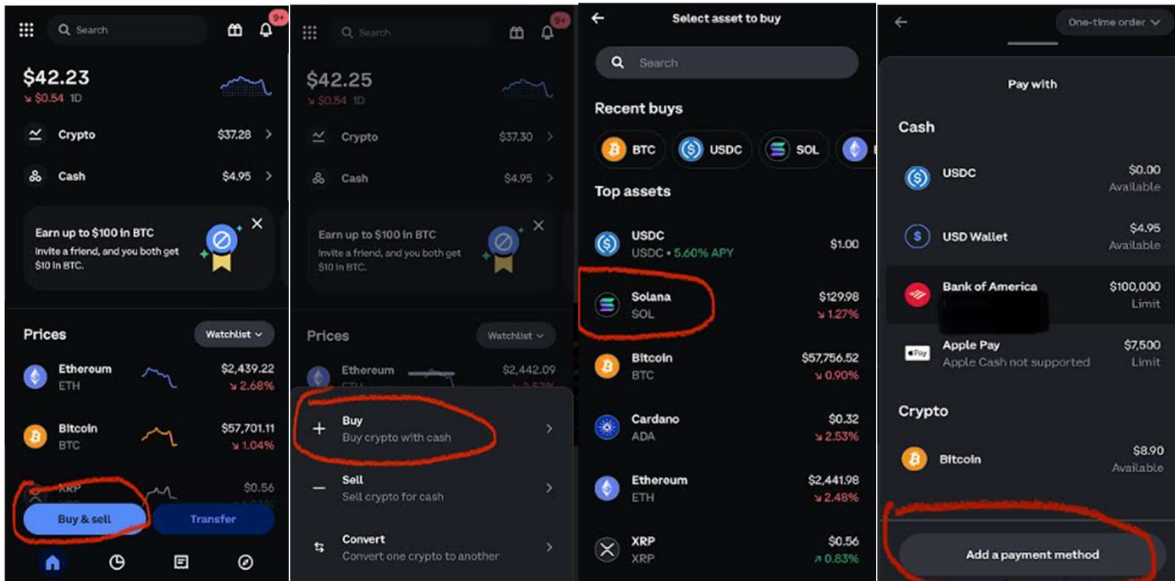

1. First you will have to download the Coinbase app from your app store.
 - Coinbase is one of the biggest centralized crypto exchanges in the world and is a publicly traded company (COIN).
2. Once you download the Coinbase app, you will start by opening it and hitting the blue Buy & Sell tab at the bottom of your screen.
3. Next you will hit the first option → Buy crypto with cash
4. A new window will open, you will select Solana (SOL)
5. At the bottom of the next screen, you will select add a payment option
6. The final step is to select the first option →bank account →fill out information

2

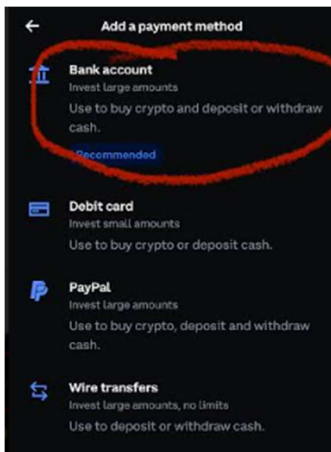

3

4

5

6

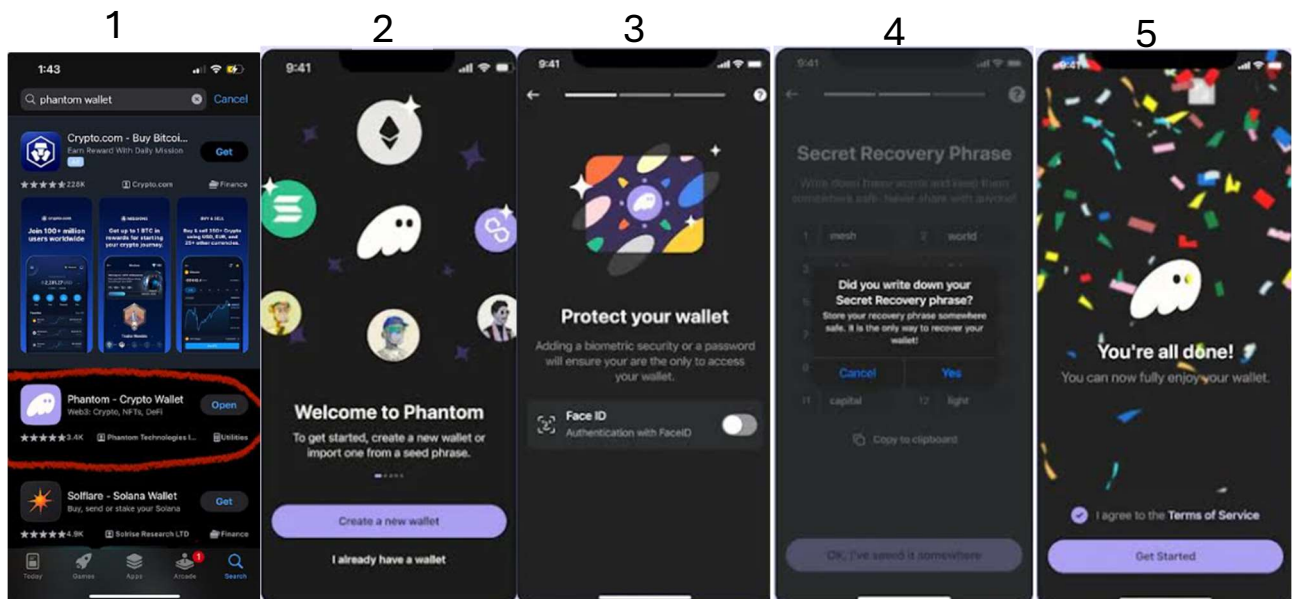

Now that Coinbase is downloaded and setup, let set up your Phantom wallet.

1. Go to your App store and follow the instructions to download the Phantom app.
2. After installing, open the app and you should see an onboarding screen. Click on “Create New Wallet”.
3. On this screen you can set up your security, whether you want face ID or a numerical password.
4. **THIS IS THE MOST IMPORANT PART:** On the screen will be your secret recovery phrase (Aka Seed phrase). **BE SURE TO WRITE DOWN THESE 12 WORDS AND PUT THEM SOMEWHERE SAFE.**

-Whoever has access to your seed phrase, has access to your wallet. If you lose your phone, the seed phrase is how you can recover your Phantom wallet.

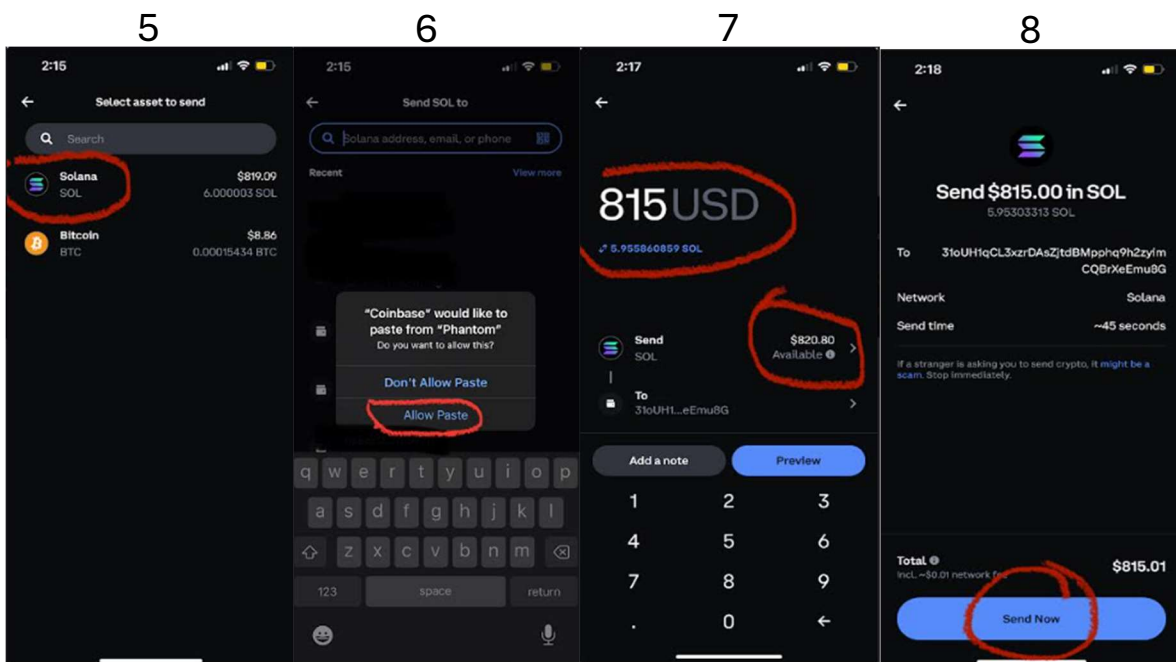

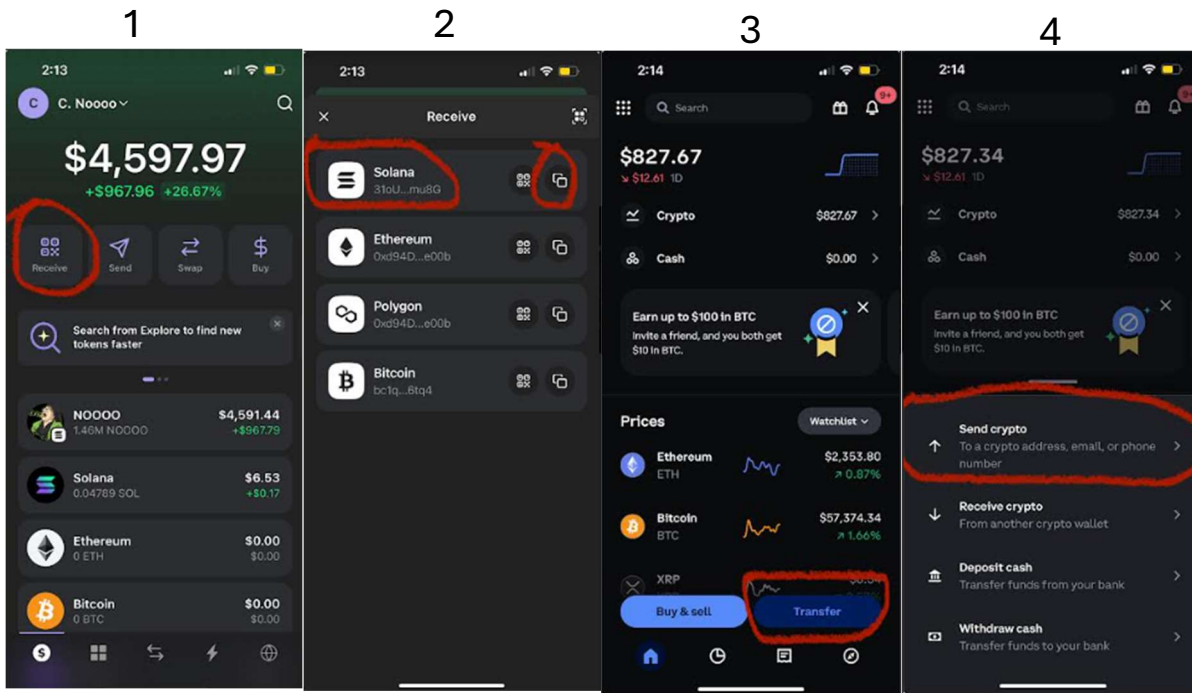

5. Click on get started and you are all done!

Now that we have both your Coinbase and Phantom apps downloaded and SOL purchased in Coinbase, it’s time to send SOL from Coinbase account to your Phantom wallet.

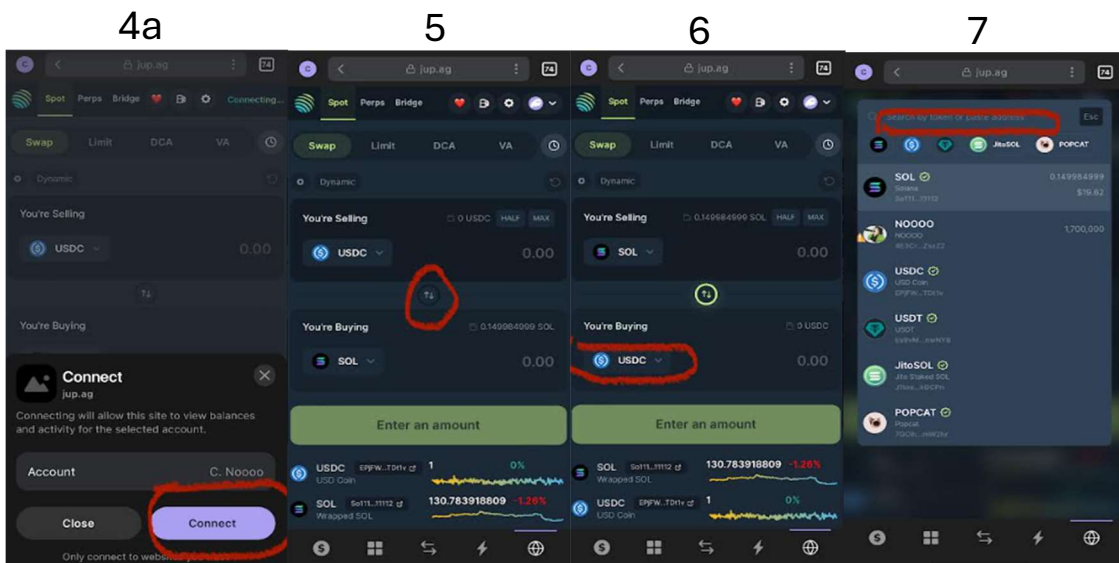

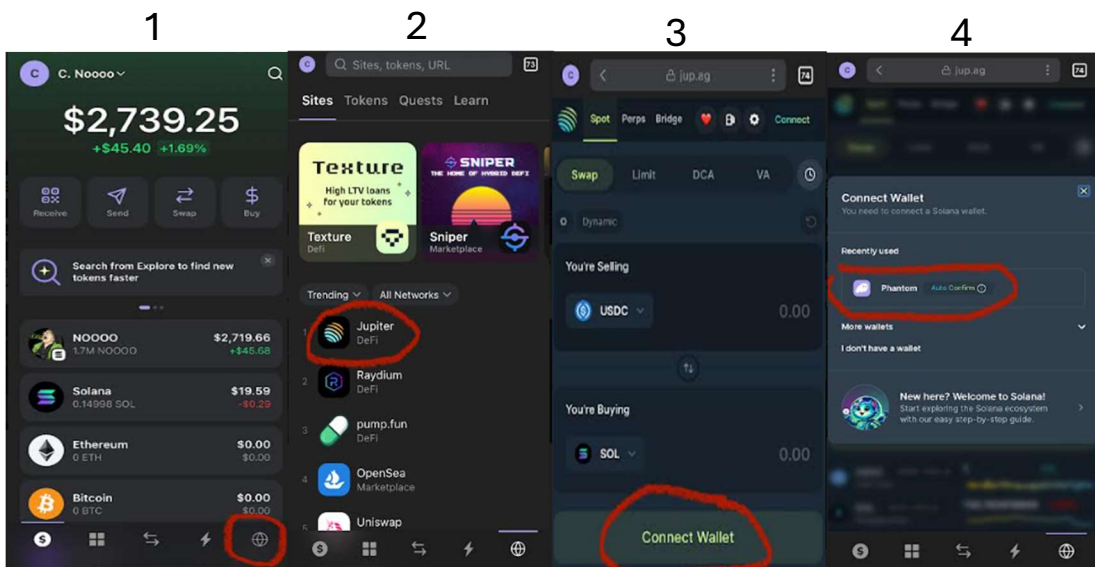

1. Open your Phantom wallet and hit the receive icon on the top right.
2. A new screen will open, click on the double box next to Solana, that will copy the contract to your clipboard.
3. Now you will open your Coinbase account and click on the blue button transfer at the bottom right of your screen
4. Once you hit transfer, a new window will open, and you will select the first option Send crypto.
5. Click on SOL.

- Once you click on SOL, a new window will pop up asking you to paste from clipboard, click allow paste. This is the SOL address that you copied from your Phantom wallet.
- When you are selecting an amount to send, DO NOT HIT MAX, always leave a few dollars for transaction costs.
- Hit Send Now and your SOL is now on its way to your Phantom wallet.

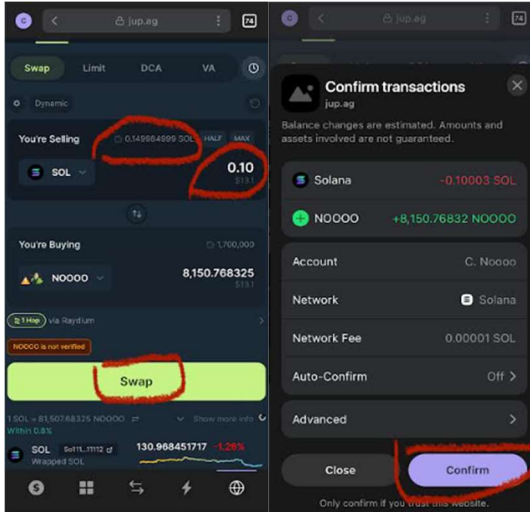

Now that your SOL has been transferred to your Phantom wallet, it's time to swap into some Nooooo!!

1. Hit the globe icon on the bottom right of your Phantom home screen
2. A new screen will open → hit 1. Jupiter
3. Once you select Jupiter a new screen will open → hit connect wallet
4. A confirm screen will pop up → hit the Phantom wall logo → (4a) hit confirm
5. Once your wallet is connected, you will hit the switch arrows in the middle of the screen
6. After hitting the switch button, click on the drop-down arrow next to USDC
7. A new window will open → paste the Noooo contract below into the search bar.
4E3CrFkrPWmnE2kFrdeRkyiovpUWpUXHtqXpXzZZsxZ2
8. After pasting in the Noooo contract, you will have SOL on top and Noooo on the bottom
 - In small grey font, it will tell you how many SOL you have, always leave a little bit of SOL, do not hit the MAX button because you will use SOL to cover the transaction fees.
9. Hit SWAP bar → hit Confirm → CONGRATULATIONS YOU OWN NOOOO!!

Disclaimer:

Look, this part sucks, but let's be real. It's a cryptocurrency memecoin. Shit happens that we can't predict or control. So like the website says, this is a cryptocurrency memecoin with no intrinsic value and no guarantee of financial return. The main thing is to join the like-minded community of people who want to own the libs. We hope the coin becomes successful, and we work to make that happen. But ultimately, don't invest more than you can afford to lose. If you don't believe, then don't buy. It's really that simple.
